# RICH URANIUM IN WAYNE COUNTY

Discovery Two Miles From Fruita Attracts Attention.

STRIKE IN AMERICAN FORK

BULLFROG MINES ARE DESTINED TO STARTLE WORLD.

two feet thick. A number of assays have been made and they show that it runs from 7 to 15 per cent of uranium, little over 9 per cent copper and ome gold, making a valuation for the rhole vein of a little over \$400 to the on. The vein has been opened up in two places by tunnels and in both places the uranium shows up well.

Mr. Pearce says the property is a rich one, and if it was not so far from a railroad, it would no doubt at-

prove in value they will erect reduction works, which will make the proposition a paying one.

Mr. Pearce also stated that some work was being resumed in the Henry mountain mining district. A Mr. Maxwell of Price has a couple of men working on a proposition in that district that is promising.

L. H. Outzen of this city has made a strike of high-grade ore in one of the tunnels which he is running on a group of claims known as the Outzen group, at the head of Bullion canpon, just west of Marysvale. The entire breast of the tunnel is in high-grade ore. The vein is being followed on the hanging wall side. The width of the ledge to the foot wall has not as yet been determined, but Mr. Outzen intends to run a crosscut a short distance further in for the purpose of determining its width and value. No assays have been made, but it contains a lot of gold and some silver and copper sulphefets. Mr. Outzen is one of the pioneer mining men of Gold Mountain and Marysvale mining districts and is still one of the owners of the great Annie Laurie mine at Kimberly. by Shipmon.

In the tunnel is in high-granter very list of a to the foot wall has not been determined, but Mr. Outsing for the purpose of the greatest in Goldfield and Tonopah is shown by the returns of the Western or Furchasing company on the four last width and value. No have been made, but it contained to figold and some silver and sulpherets. Mr. Outzen is one pioneer mining men of Gold ain and Marysvale mining disam and Marysvale mining disam and is still one of the owners great Annie Laurie mine at erly.

Yen Kanel of Boston visited the No. 2, \$318.21 in gold; \$76.38 in silver.

Yen Kanel of Boston visited the No. 3, \$128.15 in gold; \$76.38 in gold; \$76.38 in silver.

The tunnel is in high-granter with and his associates in Olinghouse have a mine the equal of some of the Western of the Western of the greatest in Goldfield and Tonopah is shown by the returns of the Western or the four grades of ore that were submitted to test parameter of the largest ore deposits of Utah, have not the four lots of a ton each returns were made on three, and the values are as follows:

Grade No. 2, \$318.21 in gold; \$76.38 in silver.

Grade No. 3, \$128.15 in gold; \$76.38 in silver.

The Utah Consolidated mines, Bingham district, are represented by a large parameter of the mines of the largest ore deposits of Utah, have not the four parameter of the largest ore deposits of Utah, have not the four parameter of the largest ore deposits of Utah, have not the four parameter of the largest ore deposits of Utah, have not the four parameter of the largest ore deposits of Utah, have not parameter of the

Ofto Von Kanel of Boston visited the Ohlo mining district last week in the interest of some eastern capitalists.

J. A. Clawson of Ephraim, who has been developing the Clawson group of claims just south of the iron properties morth. been developing the Clawson group of claims just south of the iron properties north of Marysvale, has struck a good-sized vein that runs well in gold and copper. He has epened the property up in several places and has found the same ore in every place. Frank Nebeker and J. T. Dotson have departed for the Dixie country to look into some copper claims in which they are interested and which have already made some good showings. made some good showings.

IN FROM BULLFROG.

### R. J. Brogelman Says Shoshone and Other Mines Will Startle World.

R. J. Brogelman, the old time Park City restaurant man who is now in charge of the boarding house at the Montgomery-Shoshone bonanza, came in from Bull-frog yesterday via Las Vegas. After attending to business matters here he will leave for the east for a short visit with his family, returning to camp early in the coming month.

Mr. Brogelman says the company is now

coming month.

r. Brogelman says the company is now king only about thirty-five men, but soon as cooler weather comes the force be materially increased. The mine, declares, is the biggest thing in then try. At the present time there is not than \$1,000,000 worth of ore on the aps, ore that will run over \$100 per and which, if it was being produced my of the big camps of Utah, would onsidered sensationally high grade. on and whether and the big camps of Utah, would be considered sensationally high grade.

The company is steadily developing and by and by, when enough work has been done to definitely determine the character of the equipment needed, a big milling plant will be erected. The rich orestaken out in development more than meet the full costs of operation, including all the big expenditures for ranch properties, the proposed waterworks, and everything else, and there is no doubt but what the revenues could be greatly increased, and that very quickly, was there any occasion for it.

Mr. Brogelman says the Shoshone mine and other properties of the Bullfrog district are sure to startle the world with their productiveness and earning capacities in the near future. their productiveness and ties in the near future.

AMERICAN FORK MINES.

## Strike in Lone Pine-Pacific Com-

pany Buys Ground.

pany Buys Ground.

American Fork, Aug. 13.—The Lone Pine mine, a patented property and an old time producer, has again sprung into prominence through a strike made in it this week. The strike this time promises to put the property among the shippers. Samples brought to town assay over \$200 per ton in value and it is claimed the owners have a well defined vein nearly two feet in width. E. H. Boley, one of the principal owners, is said to have made some of the smaller shareholders some fancy offers for their stock.

Lem Western, who accidentally stumbled onto a vein of ore last fall, while getting out wood in the mouth of American Fork canyon, reports that he has a well defined vein of ore that runs \$12 per ton in gold and silver. He is making preparations to do some heavy work soon and thinks when it is opened up that he will have some ore to ship.

The Pacific Mining & Milling company has just closed a deal whereby it became full owner of the Blue Rock claims on Miller hill. About two years ago the company purchased a half interest in the claims and got a bond lease on the other half, and it has now parchased the other half from the old Blue Rock company.

The lawsuit which was threatened be-

other hair from the out but rates con-pany.

The lawsuit which was threatened be-tween them and the Goodsell Mining company, whose claims join the Pacific, has been settled. The Goodsell people relinquish their rights to the claim that was in dispute, reserving a right to use the surface for their dumps, etc. The Pacific has had a large force at work for a long time, and some important develop-ments are expected there in the near fu-ture.

MAKING VALUABLE TESTS.

## Government's Plant at Portland Is Doing Fine Work.

Preliminary results of the black sand tests being made at the Lewis and Clark exposition grounds, under the guidance of Dr. David T. Day, homorary commissioner of mining to the Lewis and Clark exposition, and chief of the bureau of mines and mineral resources in the United States geological survey, will be forwarded to Washington, D. C., tonight or tomorrow, says the Portland Telegram. While the official figures of these tests will not be made public until they are given out by the head of the geological survey, it can be assetted that they are such as will prove that these black sands are one of the greatest in Oregon's mineral resources, containing, in addition to a considerable quantity of free gold, in very fine particles, much platinum and iron and a long list of rarer minerals which are of considerable value, and can be obtained from the sands by the same process.

continually being brought to the concentrators at the exposition grounds, and these are being run almost continuously. Before the official results are made known the letter containing the resume of the government force at the exposition will have to reach Washington, D. C., and a release telegraphed. In this way the facts will be made known all over the ration at the same-time. essor J. F. Kemp, head of the de-ent of economic geology in Colum-liversity, New York, and field agent or the government here during the sun error, returned today from an extensi-rip throughout southern and wester program, in which he examined prospec a many different localities where blace ands are found, and made arrangemen or the testing of these on a commerci-passis at the exposition station.

COLORADO FUEL & IRON CO.

Has to Buy Lake Superior Ore Till Its Utah Mines Are Opened.

(Special to The Herald.)

Richfield, Aug. 13.—A. E. Pearce of Fruita, Wayne county's garden and fruit spot, was over last week. He says that a very important strike of uranium has been made on property not over two miles from Fruita. The property is owned and operated by T. E. Nixon of that place, The deposities in a blanket form and is about two feet thick. A number of assays is the recent purchase of 25,000 tons Lake Superior iron over from corfigan, McKinney & Co. by the Colorado Fuel & Iron company was necessary, because of the practical exhaustion of its own supplies, says the Boston Publication News Bureau. It is probable that the company will make additional and larger purchases of Lake Superior ore until such time as it can exploit, its own ore deposits recently purchased in Southern Utah. Under normal conditions Colorado Fuel & Iron needs from \$40.00 to 550,000 tons of ore a year. In the fiscal year 1804, the year of the strike in Colorado, the company produced only 181,505 tons of iron ore.

from a railroad, it would no doubt attract mining men by the score, as a proposition like this is not found every day. If the property continues to improve in value they will erect reduction works, which will make the proposition a paying one.

Mr. Pearce also stated that some work was being resumed in the Henry mountain mining district. A Mr. Maxwell of Price has a couple of men working on a proposition in that district that is promising.

L. H. Outzen of this city has made a strike of high-grade ore in one of the true of the finished product made from it well above the cost when made from western ore. The Fuel company is in urgent need of the finished product made from it well above the cost when made from the first time that Lake Superior ore has gone as far west, and the cost when made from it well above the cost of the shipment will bring the price of the finished product made from it well above the cost when made from it wel

OLINGHOUSE ORE RUNS WELL.

Real Test of Rock's Value Determined

To the Salt Lake Herald:

I wish to make a correction in the article which appeared in the Sunday issue of your paper concerning the Yaukee Consolidated. At the time we made the change at the mine last spring we decided to try the experiment of running it with two shift bosses, Messrs. Chas. Zabriskie and C. D. Gardainer, with L. G. Burton of this city as consulting engineer. This experiment so far has proved satisfactory, and, while Mr. Gardanier has charge of the outside work, the underground operations are under the joint control of the parties named above, who consult freely together before deciding on what course to pursue in prosecuting the development work they are engaged in.

In your article you give Mr. Gardanier the full credit, but, as will be seen by the above statement, whatever credit is due should be divided among those entitled to same. Yours truly.

which are of considerable value, and can be obtained from the sands by the same process.

The sands on which results have thus far been obtained are from Clatsop beach have been tested, potably the tailings from the dredges at Oroville, where it has already been proven that thousands of dollars are allowed to slip through the miniers of the child from pain, cures diarrhoea, griping in the bowels and wind colle. By giving health to the child it rests the mother. Price, 75 cents a bottle.

## UTAH MINERALS AT PORTLAND

of the mineral section. The general scheme is to display the ores from the dividend paying mines, along with the country rock; and to the practiced eye their economic importance is very resented, by silver-lead ores, as are some of the other mines of that district.

The Park City district.

The Park City district of Utah is one of the most important mining regions of the west, and is represented by a beautiful block of galena from the Silver King mine that weighs about 1,700 pounds. The values are 300 ounces of silver to the ton and 65 per cent of lead. This mine paid a dividend last year of \$1,300,000 and has been paying this amount for a number of years.

The Daly West mine, of the same region, is represented by a pyramid of rich silver galena ore. This mine pays \$72,000 per month in dividends. The Quincy mine, also of the same district, is well represented by its characteristic lead ore, as is also the Keith-Karns mine. A number of smaller The Park City district of Utah is one

Laurie mine, of Fittle county, on which the cyanide process is used. This property is extensively operated.

Among the displays of ores from other mines is the Boston and Terrace, showing copper carbonate ores. The Nast mine, of Bingham, shows sulphide of copper ores. The Deer Trall mine, of Marysvale, Piute county, has an exhibit of gold quartz. Dixie mine, Washington county, shows beautiful specimens of blue azurite. The Letitia and Wisconsin mines display copper ores. The Century mine, of Park Valley district, contributes gold quartz with exceedingly high value. The Century is milling its gold quartz with an amalgamation mill, which is said to be the only one in the state.

The Johnnie and other mines in the Stateline mining district are represented. El Dorado mine, of the Sierra Madre district, has a display of lead ore.

bonanza class, but the supply is very extensive, which is a condition neces-sary for successful economic mining.

Gilsonite, Ozokerite, Etc.

AT PORTLAND

Gilsonite,Ozokerite, Etc.

Among the displays of Utah is a very important one, namely, a mass of tilsonite from the Uintah reservation, a mineral used extensively for roofing and pavements. This is a very peculiar geological formation. There is also ozokerite or mineral wax from the same section, which is used as a base in varnishes and is in demand for this purpose. It has also been made into candles, which burn as well as real wax candles. This is a hydrocarbon. There is also a display of albertite, a hydrocarbon product which has somewhat the characteristics of jet and is produced in small quantities. There is a display sample of real jet, which is found in considerable use on account of its adaptability for roofing and for coating pipes, and also used a good deal for protecting castings and sheet iron. Elaterite, or mineral rubber, is also useed for insulators. All these The mineral exhibit of Utah at the Lewis and Clark exposition is displayed in the state building, occupying a large portion of ft. A great part of this exhibit was displayed at St. Louis, and the collection has been added to materially for the occasion under the management of R. H. Bradford of the Utah School of Mines, who is in charge

trict, has some fine specimens of copper and gold ore and is one of the old producers, paying dividends regularly.

A beautiful specimen of high-grade copper from Carisa mine has recently been added to the collection. This mine is also in the Tintic district.

The Utah Copper company's mines of Bingham district have a characteristic display, showing the peculiar ore which is distributed through the rock uniformly. This deposit is now being mined for copper sulphides which is distributed through the rock uniformly. This deposit is now being mined for copper sulphides which is distributed through the rock uniformly. This deposit is now being mined for copper sulphides which is distributed through the rock uniformly. This deposit is now being mined for copper sulphides which is distributed through the rock uniformly. This deposit is now being mined for copper sulphides are well developed.
